

Commenting Code

- Java provides three methods for commenting code.

Comment Style	Description
//	Single line comment. Anything after the // on the line will be ignored by the compiler.
/* ... */	Block comment. Everything beginning with /* and ending with the first */ will be ignored by the compiler. This comment type cannot be nested.
/** ... */	Javadoc comment. This is a special version of the previous block comment that allows comments to be documented by the javadoc utility program. Everything beginning with the /** and ending with the first */ will be ignored by the compiler. This comment type cannot be nested.
